

Appsbroker Enterprise Framework

Your Landing Zone for Google Cloud...

Your Landing Zone for Google Cloud

Establishing a safe and secure Landing Zone is vital for organisations to fully realise the benefits of cloud adoption, while navigating its complex challenges.

Landing Zones provide pre-configured environments that enable rapid access to the infrastructure, scalability, security, and services that cloud has to offer.

Our Landing Zones are built for Google Cloud Platform, and offer a readily available, enterprise-grade solution to meet your digital transformation objectives.

Introducing the Appsbroker Enterprise Framework

The Appsbroker Enterprise Framework (AEF) is a comprehensive enterprise transformation framework that empowers organisations to get the most from Google Cloud. Modular by design, AEF's proven approach offers robust security whilst increasing flexibility, allowing your business to adopt the features you want from the cloud when you need them.

◆ Revolutionary Approach

AEF allows us to deliver the speed and convenience of a pre-configured solution, but maintain the complexity and scope of a truly bespoke cloud migration strategy.

◆ Enterprise-Ready Platform

Built from substantial experience in delivering against the complexities of large-scale digital transformation, AEF enables quick and effective mapping of enterprise-level requirements.

◆ Repeatable by Design

AEF employs a "write once, repeat many" methodology ensuring a schematic for cloud adoption that's safe, secure, and repeatable so your organisation can evolve with the cloud.

◆ Safe & Secure by Default

Enforced compliance and governance allows teams the agility to continually deploy and collaborate seamlessly without compromising your security foundations.

◆ Empowers Your People

AEF uses familiar concepts and tooling like Infrastructure as Code (IaC) to vastly reduce delivery timelines, empowering your teams and increasing efficiency.

◆ Evolves With You

Technology and business culture continue to develop exponentially fast, creating unforeseen challenges. AEF equips you to adapt with the change and stay at the cutting edge.

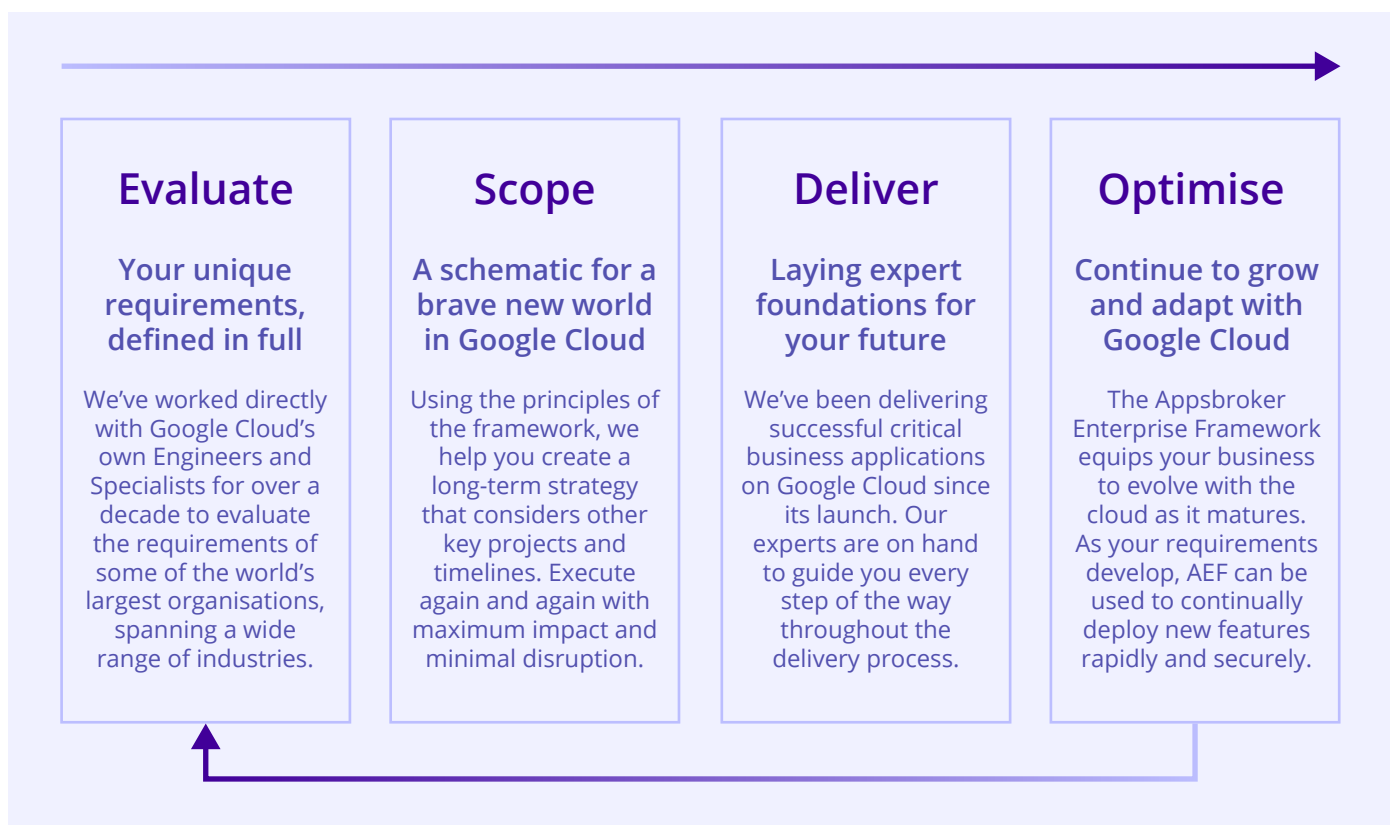

Why develop our own framework?

The Appsbroker Enterprise Framework has been developed over the course of a decade in conjunction with our enterprise customers, as we've worked with them to navigate the digital transformation journey. Our Landing Zones are specifically designed for Google Cloud based off this experience and facilitate best practice and easy transitioning, irrespective of the complexity of the migration.

The framework is designed to map out common requirements and solve typical challenges encountered in these spaces, and is repeatable across different industries, sizes of business and distinct processes. Google Cloud Platform provides a versatile and scalable set of features and infrastructure that enable businesses to realise extraordinary results, and AEF helps to make this transition simpler through a dedicated programme of consultancy, which is mapped out below.

Our approach, explained

Our Cloud Migration Specialists work with you at every stage of this process, gaining a detailed understanding of your requirements and the best way to apply AEF and for you to rapid adopt cloud services to realise the transformation you require.

Our Success with AEF

AEF today realises ambitious digital transformation objectives for major enterprises in critical environments such as retail, manufacturing, financial services and public sector. It is the foundation of numerous multi-million pound migration projects for these organisations, providing the confidence in security and delivery they need to make significant commitments and initiate real progress. Our team works closely with stakeholders from C-Level to Engineering and Development teams to deliver truly extraordinary results.

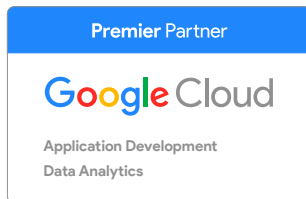

"We are achieving fantastic outcomes in partnering with our clients using AEF. The pace of change and the scope of cloud adoption is being more fully realised than we have previously seen. The speed and ease with which stakeholders across business, security, architecture and delivery engage with AEF is instrumental in this success."

Jon King
Cloud Solution Specialist at Appsbroker

appsbroker Your Google Cloud Partner

Appsbroker is the largest Google Cloud-only practice in Europe, and the only Google Cloud Premier Partner in the UK to achieve specialisations in both Application Development and Data Analytics.

With over a decade of delivering enterprise solutions using Google Cloud, Appsbroker is recognised by the world's largest organisations as a leading digital transformation partner.
